**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Response to Amendments***

1. The reply filed 8/30/06 consists of amendments to claims 1, 4, 12, 14 –16, cancellation of claims 3, 5, 6, 13 and 20-23 and remarks related to rejection of claims. The claims are not allowable as described below.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 4, 7-8, 10-12 and 14-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Luther et al. (5867621).

Luther (Figures 1-6) shows a multi-fiber ferrule 38 with a molded ferrule body having a plurality of bores 52 for receiving ends of optical fibers, openings 50a, 50b for receiving alignment members and defining a longitudinal axis wherein the ferrule body comprises an integrally formed geometrical reference feature (end face of 42) that defines a reference plane which can be used for determining the angularity of a plane defined by the molded end face 46, 48 by visually comparing the two planes. The geometric feature is not on a bumper of the ferrule. The end faces 46, 48 are on a bumper of the ferrule body. The molded end face has a first surface normal to the longitudinal axis and a second surface 46 at a predetermined angle to the first surface. The geometric reference feature eliminates the need of using an interferometer, thereby eliminating the need for using a truncated precision measurement pin for determining angularity of the plane defined a

region of interest. The reference feature is recessed from the end face 48 and is not machined. The surface of the feature is perpendicular to the axis. The reference feature protrudes from the end face. The reference feature is accessible when alignment members are received in the openings 50a, 50b and not altered throughout the useful life of the ferrule. The molded end face is not machined. The geometrical feature is on an exterior surface of the ferrule body.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Luther et al. (5867621).

Luther shows all the features of this claim except the reference feature within the opening. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to provide the reference feature within the opening since it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japiske, 86 USPQ 70.

***Response to Arguments***

6. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
